## California 911 System

CA 911 Outages		
Northern California	Central California	Southern California
No 911 Outages	No 911 Outages	No 911 Outages

### 911 Outages/Remote/Community Isolations:

- None reported.

### Service Interruptions:

- None reported.

# WEATHER OF CONCERN

## Weather of Concern

- An atmospheric river will bring deep moisture into California Friday and Saturday. This will be a warm storm with very high snow levels. Heavy rain, flooding, and debris flows are potential problems, especially in the Sierra Nevada and Foothills.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

An upper level high pressure ridge will be over the region until early Thursday, then move slowly east. However, a weak disturbance passing through the Pacific NW could produce a few rain showers in far northern California late tonight and Wednesday, with variable mid and high cloudiness elsewhere in the region. Snow levels will be 6000 ft or higher. S-SW winds will develop today, with gusts reaching 25 mph or so. Temperatures will be around 10 degrees above normal.

A stronger and wetter system will move onshore Thursday. By the evening hours widespread light rain is possible. Rain will become heavier Thursday night through Friday night, when the main cold front passes. Snow levels will drop to 4000 ft in the north and 5000 ft in the south once the front passes. Gusty S-SW winds will continue to increase each day, mainly in the north and east. Gusts will reach 30 mph or so Wednesday and 35-45 mph Thursday and Friday. Widespread showers are likely Saturday, followed by lingering mountain showers on Sunday. Another wet weather system is possible during the middle of next week.

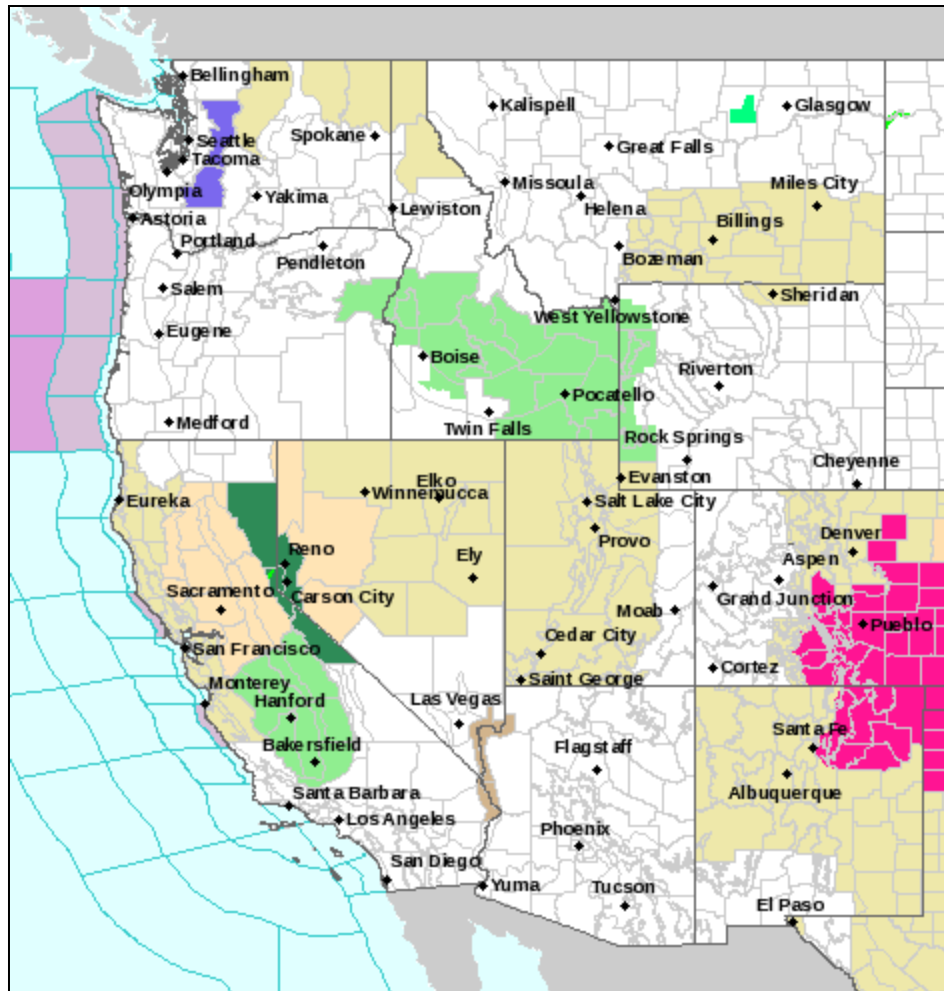

## **SOUTHERN CALIFORNIA**

A weak ridge of high pressure will cause temperatures to be around 5 degrees above normal away from the coastal areas through Thursday, with upper 50s and 60s across the mountains and 70s to low 80s in the valleys. Minimum humidity will be mainly between 20% and 40% away from the coastal areas through Thursday. Winds will be light through Thursday. A Pacific trough will drop down the West Coast bringing a little below normal temperatures Friday and Saturday. This trough will also bring showers to the region. Showers will start over the northern parts of Central California Friday morning and then spread slowly south reaching Southern California Saturday morning. Showers will come to an end Saturday night. The Sierra and the Central Coast will receive between 2 and 4 inches of rainfall with this trough. Otherwise, most locations will receive less than a half inch of rainfall. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface over the wind prone mountain and desert areas Friday afternoon through Saturday evening. Another weak ridge of high pressure will set up over California Sunday and Monday which will cause temperatures to become a little above average once again.
